

National Cyber Security Centre

CPA Certification

WHO IS NCSC

The National Cyber Security Centre (NCSC) is the UK's authority on cyber security. The NCSC has access to some of the most sophisticated capabilities available to government. Their main purpose is to reduce the cyber security risk to the UK by improving its cyber security and cyber resilience.

ABOUT CPA CERTIFICATION

NCSC uses CPA standards to evaluate commercial off-the-shelf products, and their developers, against published security and development standards.

A security product that passes assessment is awarded Foundation Grade certification. This means the product is proven to demonstrate good commercial security practice and is suitable for lower threat environments.

WHY NCSC CERTIFICATION?

We know it's important to our clients when choosing a sanitization software that they know what to expect. WipeDrive is committed to the highest levels of certification. That is why we have taken steps to secure our software with both EAL 2+ and the NCSC's demanding standards.
