

WipeDrive vs DBAN

When data security is your priority it's important you make the right choice when erasing retired drives. WipeDrive was engineered specifically for corporations and government entities. See the difference choosing the right tool can make.

ATTRIBUTES AND VERSATILITY

Permanently erasing user accessible data is only part of the solution. Remapped sectors and hidden areas can still harbor sensitive data and must be specially addressed. WipeDrive can access and securely erase these areas that DBAN ignores.

WipeDrive offers versatile deployment options to meet your organizations unique needs. These options include deployment from a CD, USB or .EXE file on an individual machine, or hundreds of computers at once from a PXE network. With our Remote wiping capabilities machines can be wiped quickly and efficiently without the need to move it's location. DBAN is limited to CD only.

Erase Features & Functionality	DBAN Intended for personal use only	WipeDrive Recommended for commercial use
Permanent Data Erasure	Yes* *removes data, but with no guarantee & no report	✓
Deployment Methods	CD	CD, USB, EXE, PXE Network, PSEXEC, Active Directory, Remote Desktop
Remapped Sectors and Hidden Areas	✗	✓
Secure SSD Erasure	✗	✓
Certified Erasure Reports	✗	✓
RAID Dismantling	✗	✓
Crypto Erase	✗	✓

AUDIT TRAIL

WipeDrive offers flexible reporting options with expanded custom field functionality to track company-specific data. Most importantly our logging creates an audit trail with comprehensive drive identifiers and wiping information to prove the drive was sanitized properly. DBAN offers no reporting, no guarantee or proof to verify a wipe was successful.

CERTIFICATION AND COMPLIANCE

WipeDrive is the world's most highly-certified data erasure software. WipeDrive is the only data erasure tool that has been certified to meet the NIAP's (National Information Assurance Partnership) EAL 4+ Standard. But this is only one of many rigorous certifications we have undergone so you can be confident your data is permanently erased. DBAN claims to meet a few industry standards, but offers no third-party certification.

Certifications & Compliance	DBAN	WipeDrive
NIAP EAL 4+ Certified	✗	✓
NIST 800-88 REV 1 Compliant	✗	✓
HIPAA Compliance Certification	✗	✓
DoD 5222.2M	✗	✓
NCSC (National Cyber Security Centre)	✗	✓
ADISA - SSD Certification	✗	✓
Erasure Standards	6	20+

CUSTOMIZATION AND SUPPORT

While WipeDrive is a powerful and versatile tool right off the shelf, capable of meeting requirements for most uses, we also offer customization to meet your specific needs. You don't need to settle for almost right, get exactly what you need to meet all your data sanitization requirements. If you are unsure what customization you need our Enterprise Support Team is ready to guide you through the process. DBAN offers no support for it's product, no updates and no customization.
